A romantic couple is shown in a close-up, medium shot. The woman, on the left, has long blonde hair and is wearing a grey knit beanie and a brown corduroy jacket. She is smiling broadly, looking off to the side. The man, on the right, has a beard and is wearing a dark blue knit beanie and a blue and white plaid jacket over a grey sweater. He is also smiling and looking in the same direction. They are standing in a forest with trees and fallen leaves in the background, suggesting an autumn or winter setting. The word "WINTER" is overlaid in large white letters on the bottom left.

SUSTAINABLE FEATURES

Dope dyeing

Our aim was to find a way to reduce water in the colouring process.

The conventional dyeing process uses hot water and chemicals to make the colour adhere to the synthetic fiber, consuming water, energy and emitting CO₂.

Dope dyeing instead diverts from traditional wet processing because of its reduced environmental impact. **Typical of recycled polyester, it involves adding colour pigment “upstream”, directly to the melted plastic solution before the fiber is made.**

Unlike traditional processes where yarns are produced and then dyed, **with dope dyeing the pigments are trapped inside the recycled plastic after it cools to a solid form, becoming part of the new, stronger yarn.** With this approach, dyeing can be done by hot transfer without immersion in water.

We partner with **ReTraze Aqua-® solution-dyed recycled polyester yarn** which saves energy, water and emissions during the process. **Their source of plastic bottles is collected entirely within 20km from the seashore**, and they continue to work on expanding the collection area and tracking system.

We continuously try to improve water savings and look for new and more efficient dyeing technologies, which we're striving to adopt as they become available.

Recycled polyester

Polyester is an important fiber in our collections and one of the most widely used in the world: **strong, durable and crease-resistant, it allows us to make lightweight headwear that dry quickly.** But its production comes at an environmental cost: it's a synthetic fiber derived from oil with a lower environmental impact than the production of natural fibers in terms of water and land¹ but, the energy required to produce polyester makes it a very high-impact process². This is why **Atlantis wants to encourage the use of recycled polyester instead of virgin fossil-based one.**

Its alter-ego, recycled polyester, or rPET, **is made from polymers obtained by melting used plastic bottles and transforming them into textile fiber.**

Did you know that every minute, nearly 1 million plastic bottles are purchased around the world?³

Even if recycled options allow a reduction of emissions compared to the virgin options, we know that it's not the definitive solution to pollution from synthetic fibers: rPET's mechanical recycling process significantly reduces the material's quality and unfortunately very few clothes are recycled back into textile use and the majority of wasted polyester garments are still in the landfills. Moreover, rPET is not biodegradable and loses microplastic fibers as much as virgin plastic.

¹ Sustainable Apparel Materials 2015 (<https://matteroftrust.org/wp-content/uploads/2015/10/SustainableApparelMaterials.pdf>)

² (Environmental Sciences Europe (2021) Analysis of the polyester clothing value chain to identify key intervention points for sustainability)

³ The Guardian

However, there are good reasons for choosing to use this material in our products:

Resistance: when exposed to the sun, the material does not lighten and does not lose quality, unlike cotton; this allows for greater durability and a reduction in waste.

Lack of large-scale alternatives: there are currently no alternatives to mechanically recycled rPET on a large scale.

To remedy the problems relating to the rPET, we will commit to a series of virtuous behaviours along our path of sustainable transition.

For example, **we believe it is necessary to carry out continuous monitoring of the chemically recycled polyester market which**, although generally characterized by a greater environmental impact than its mechanically recycled equivalent, can be subjected to a greater number of recycling

processes while keeping the quality intact. Furthermore, **we are evaluating collaborations with organizations along the supply chain to guarantee the recycling of the waste generated during production.**

Another option that we consider as an alternative to rPET is the use of other materials, such as recycled nylon or recycled wool. In conclusion, recycled polyester is still a more environmentally sustainable fiber than virgin polyester.

The more we recycle, the less garbage winds up in our landfills. We can reduce our reliance on petroleum, save natural resources, production and energy costs and reduce the negative impacts of the extraction and processing of virgin materials.

Our LCA study⁴ conducted on polyester products showed that when we replace virgin polyester with recycled polyester we reduce the CO2 emissions of 4% and if we replace acrylic we have a reduction of almost 70%. Impressive!

Recycling helps us reduce the industry's reliance on fossil fuel sources and manage our resources in a more ethical way: using products to their full potential.

4 The LCA was conducted on selected articles, taking takes into account the complete life of the product, from its production to the distribution.

Polylana®

Polylana® fiber unlocks new potential in fiber creation with reduced environmental impact and enhanced performance capabilities.

Polylana® fiber is an eco-efficient staple fiber with characteristics similar to acrylic and wool fiber, at lower impact.

Polylana® fiber can be blended with any natural and synthetic fiber to enhance and adjust performance, look or other characteristics of the final product.

AWARE™ is an integrity solution. A method that can authenticate recycled yarns in a final product to avoid greenwashing.

Polylana® Fiber is recognized by PETA (People for the Ethical Treatment of Animals, Inc.) as a vegan alternative to animal-derived materials.

Low impact

The production of the Polylana® fiber requires considerably less water which makes our overall impact significantly lower.*

* verified LCA by Made2Flow

No animals

Polylana® fiber is vegan. No animal products or derivatives are used in its manufacture.

Efficient dyeing

Polylana® fiber absorbs faster and colors on lower temperatures.

Recycled nylon

Nylon is a super-performing fiber: particularly resistant, stretchable and lightweight, it allows us to produce comfy and strong headwear.

However, it has a high environmental cost: it belongs to a family of polymers called polyamides and, like polyester, nylon is made from a non-renewable resource (crude oil) in an energy and chemically-intensive process which, however, has the benefit of creating super-performing fabrics.

Our strategy includes the conversion of conventional materials into preferred ones with a better environmental and social outcome.

Recycled nylon is our reply to the need of performance, but with less impact.

It is made from pre-consumer waste from industrial processes, **including material scraps that would otherwise have been downgraded or sent to a landfill.**

Switching to recycled nylon is our way of being less dependent on virgin oil, reducing greenhouse gas emissions and, of course, waste material.

Organic cotton

Cotton is the world's largest non-food crop. Grown by more than 80 countries, its production is concentrated in India, China, US, Brazil, and Pakistan which combined together produce 75% of all the world's cotton.¹

Cotton is an impressive material and one of the most used in our collections: it's **soft, comfortable, breathable** and **hypoallergenic**.

Despite its presence in nature, conventional cultivation is often not so sustainable, **which uses chemicals** (synthetic pesticides, herbicides, fertilisers and GMOs) and **large amounts of water for irrigation, irreversibly damaging the soil**. There are also social impacts, **such as child and forced labour and exposure to potentially toxic and carcinogenic compounds**.

¹ The World Counts (2021) World Cotton Production Statistics.

The alternative exists and is called **organic cotton grown without the use of pesticides and chemical fertilisers** which, in the long run, filter both into plants and into the soil. **Organically farmed cotton comes from controlled and certified crops**, supporting biodiversity and healthier ecosystems.

This way, **water consumption is significantly reduced, soil fertility is preserved and better working conditions** and health are guaranteed to farmers and their families.

The LCA study² we conducted also confirmed that choosing organic cotton for our products led to a **reduction of CO2 emission from 18% to 21%** compared to the conventional one.

Organic cotton was one of the **first preferred materials introduced in 2018** and we keep investing in this fabric selecting certified supply chains that include both environmental and ethical standards and allow us to verify the fiber origin.

² The LCA was conducted on selected articles, taking takes into account the complete life of the product, from its production to distribution.

Recycled cotton

Producing a cotton fabric requires a large amount of water. About 10,000 litres of water are needed to produce 1kg of cotton, more or less the equivalent of one T-shirt or a pair of jeans.

If we choose the alternative by **using recycled cotton, we extend the life span of a fiber** that has already been created using fewer environmental resources.

Recycled cotton is regenerated cotton fiber obtained from production waste, like the one in our collection (pre-consumer) where our supply chain partners collect textile scraps from fabric production, or fabrics that have reached the end of their life (post-consumer). **The pieces of fabric, once collected and divided by colour, are chopped and transformed back into raw fiber.**

The result is then spun back into yarns for reuse in other products.

With regenerated cotton the same fabric can find new life in other products **using less energy, water, chemicals and freeing up the land** for other crops compared to virgin cotton, as well as preventing the product from ending up in landfills.

We are constantly working with our supply-chain partners to use more recycled cotton in our raw materials whenever possible.

A black and white dog, possibly a Border Collie, is looking up at a grey, textured hat. The hat has a small, dark, triangular label with the word 'ATLANTIS' in a script font, 'WATER RESISTANT' in a bold sans-serif font, and a small icon of a dog's head. The background is a solid, vibrant blue. The dog's face is partially visible, showing its white fur and black markings around its eyes.

HIGH PERFORMANCE

ENERGY

MAIN FABRIC: 100% POLYESTER

Unstructured six-panels baseball hat made of durable cationic ripstop, the Energy cap features a very light water repellent fabric and our dry-tech sweatband. With high water-resistance and breathability, your head will stay cool and dry come rain or shine.

AUTOMOTIVE

A romantic couple is shown in profile, embracing each other. The man, in the foreground, wears a grey knit beanie and a black leather jacket. The woman, behind him, wears a blue knit beanie and a grey sweater. They are outdoors, with a blurred background of green foliage and a body of water. The text "MADE IN ITALY" is overlaid in white, bold, sans-serif capital letters on the right side of the image.
